SUMMARY STATEMENT OF DEFICIENCIES
(FINDINGS PRECEDED BY TAGS AND REGULATORY IDENTIFYING INFORMATION)

0200 - Emergency Environmental Control - 58A-5.036 FAC

Based on observation, resident and staff interviews and review of the facility Emergency Power Plan (EPP) the facility failed to ensure they informed 3 (Residents #1, #2 and #3) of 3 residents about the EPP. The facility also failed to ensure they implemented all the components as described in the EPP.

The findings included:

On review of the facility EPP approved by the county on and implemented by the facility on said the administrator would test the generator and do routine maintenance on a monthly basis. The facility would maintain a of 80 degrees with a portable air conditioning (A/C) unit via the portable generator. The facility would store 75 gallons of gasoline on site and when an emergency is declared staff will retrieve the remaining 80 gallons of gas at the local gas station to maintain the 96 hours of required generator operation.

On at 9:15 a.m., a tour of the facility was conducted with Staff A and Staff B. The generator in the EPP was located in the garage in the original packaging. The portable A/C unit needed to keep the facility at 80 degrees as described in the EPP was not at the facility. The facility did not have the 75 gallons of gasoline at the facility as required by their EPP or the containers to retrieve the remaining 80 gallons to maintain the 96 hours of required generator operation.

On review of Residents #1's, #2's and #3's record revealed no documentation they and/or their legal representatives were notified of the approved EPP.

On at 10:00 a.m., interview with Resident #1 said she does not remember anyone from the facility informing her of the comprehensive emergency plan and/or the EPP. Resident #2 and #3 were not interviewable and their legal representatives were not available for interview.

On at 10:30 a.m., interview with Staff A and Staff B confirmed they did not have a portable A/C unit nor did they have the 75 gallons of gasoline on site as written in the approved EPP. They said the portable generator was still in the original packaging and had not been tested and/or routine maintenance as described in the EPP which was implemented . They confirmed, after reviewing Residents' #1, #2 and #3's records, that the residents or their legal representatives were notified of the approved EPP as required.
